

# Split Crops for GTAP Power v9 2011

December 2016

## Introduction

This sequence of eight folders helps splitting the GTAP power database to irrigated and rainfed. To split all 8 crops, follow the sequential splitting numbered from 01-08.

## Step 1:

Please add the original GTAP Power v9 2011 Database files including

- "basedata.har",
- "default.prm",
- "gtapview.har",
- "sets.har",
- "taxrates.har"

to the input folder for first split (pdr). Information required by SplitCom is provided in

- "secsplit.har" and
- "userwgt.har".

After having all the input files, you can run SplitCom. It should generate the files in the output folder.

## Step2 - Step8

Copy the output from previous step into the input folder. Other information required by SplitCom is provided in each folder as

- "secsplit.har" and
- "userwgt.har".

After having all the input files, you can run SplitCom.
